

AKASH BHABAR

Software Engineer — Backend Systems — Distributed Processing — AI-Powered Services

#bhabarakash@gmail.com  linkedin.com/in/akash-bhabar  India

SUMMARY

Backend-focused Software Engineer with 2+ years of experience building scalable, asynchronous backend systems and AI-driven data processing pipelines. Strong expertise in Python, RESTful API design, distributed job processing, and cloud-native services on AWS and GCP. Demonstrated commitment to code quality, testing, observability, and maintainable software design, with a strong focus on correctness and reliability.

SKILLS

Python	FastAPI	RestAPI	MongoDB	Git	Docker	AWS	AI Agents	LangChain
LangGraph	Linear Regression	Decision Tree	CNN	YOLO				

EXPERIENCE

Software Engineer
Blucursor Infotech Pvt Ltd

08/2023–Present
India

- Designed and developed RESTful backend services using FastAPI to support document ingestion, validation, and AI-powered analysis workflows.
- Built asynchronous data processing pipelines for large e-file PDFs, including document splitting, OCR extraction, schema validation using Pydantic, and structured JSON output generation.
- Implemented background workers and async job processing using cloud queues to process multiple documents concurrently and reliably.
- Integrated Gemini LLMs using LangChain and LangGraph to extract structured data from unstructured documents, perform rule-based validations, and generate summaries and clarifications.
- Owned end-to-end design and implementation of backend modules including document classification, validation engines, AI extraction services, and MongoDB persistence layers.
- Deployed backend services on AWS and GCP, using SQS for asynchronous workflows and S3 / GCP Cloud Storage for document storage.
- Containerized applications using Docker for both local development and production environments.
- Wrote unit tests using pytest and improved code quality through continuous refactoring driven by Pylint and SonarQube reports.
- Implemented JWT-based authentication, API versioning, and rate limiting to secure and scale backend APIs.
- Used structured logging and Grafana dashboards to monitor system health and debug production issues using logs, metrics, and alerts.

PROJECTS

AI-Enabled Knowledge Chatbot & Automation Agent

- Built AI agent-powered knowledge chatbot capable of answering queries from structured and unstructured data sources.
- Developed automation workflows using AI agents to reduce manual intervention in document understanding and validation processes.
- Focused on modular backend design, reusable agent components, and reliable orchestration.

EDUCATION

Bachelor of Technology (B.Tech)
Electronics and Communication Engineering
Prestige Institute of Engineering Management and Research, Indore

2023

KEY ACHIEVEMENTS

Scalable Document Processing

Processed large PDF files asynchronously with high accuracy and reliability.

Production Readiness

Implemented structured logging and monitoring to support production debugging.

Code Quality Improvements

Improved maintainability and reduced bugs through refactoring driven by static analysis tools.

AI-Driven Automation

Automated complex document understanding workflows using LLM-based agents.

INTERESTS

AI Agents — Backend Craftsmanship — Distributed Systems — Continuous Learning

TRAINING / LEARNING

Actively learning SQL databases, Kafka and streaming systems, Kubernetes, functional programming concepts, and systems programming fundamentals through courses and hands-on projects.
